What is composting?

- Composting is nature's recycling — a process which diverts food scraps and green waste from landfills to be repurposed for other uses

- Composted food scraps are anaerobically digested to generate electricity for our local water treatment plant

Why compost?

- Food is the largest single source of waste in California, making up 15.5 percent of the waste stream

- Composting takes us one step closer to achieving our goal of Zero Waste by 2020!

Composting in your Apartment:

- A bag dispenser has been installed in a common area with compostable bags to line your container

- Each apartment has been provided with a composting bin that can be used on your counter top or under your sink

Follow these simple instructions to participate!

1. Line your kitchen container with a compost bag
2. Fill the bin with approved kitchen scraps (see list) as you go about your day and prepare food
3. When the bag is full, remove it and drop it in your designated organic compost bin
Thank you for helping us compost!

Questions? Email ucirecycles@uci.edu
